

EQUIPMENT ASSEMBLY TEST

To complete the test successfully the candidate will need to assemble and then disassemble the hydraulic equipment in the manner described within 5 minutes. Safety goggles and gloves must be worn.

- Screw the small tube into the base plate
- Screw the ram onto the small tube
- Screw the large foot onto the top of the ram, be aware of cross threading
- Screw the small connection tube to inner thread on top of the ram
- Screw the long tube into the small connection tube
- Screw the small foot onto the top of the long connection tube
- Remove the dust cap from the end of the hose
- Remove the dust cap from the connection on the ram
- Connect hose into ram

Following the correct assembly of the hydraulic equipment the time will be noted and then the instructor will inform when to begin disassembling the equipment. When completed the time will be noted by the instructor and the test will conclude.
